Sales Performance Analysis

Built from the KPI cards, bar charts, pie chart, and line chart visible in the source dashboard. Each chart below is followed by what it shows and what it means for the business.

$1,353,703	809	$1,673
Total Sales	Total Orders	Avg. Order Value (calculated)

TREND

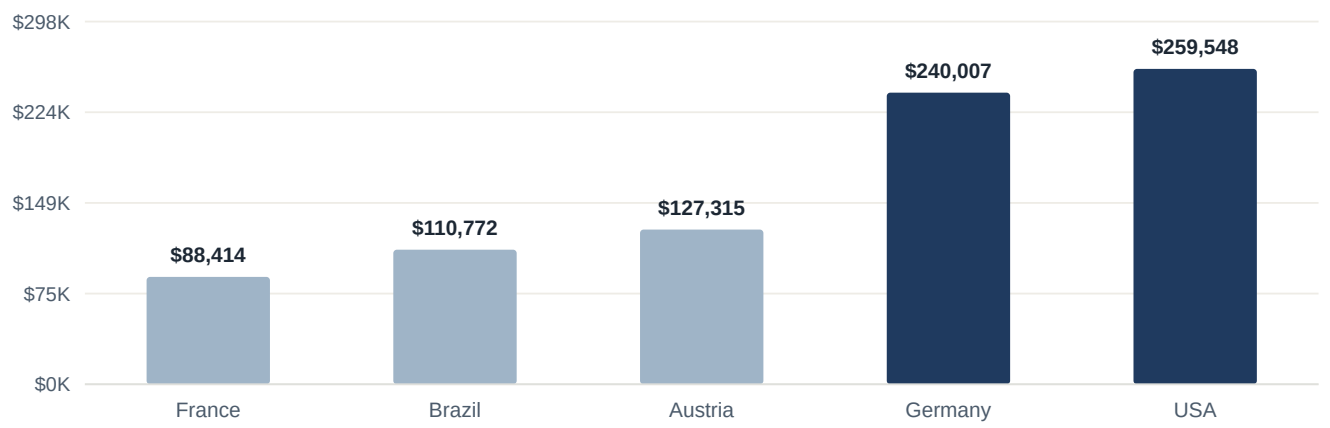

Sales over time

Sales rise steadily across the four labeled points on the dashboard, from roughly $50K up to about $180K. *The axis order (Aug → Nov → Feb → Jan) isn't a normal calendar sequence*, which suggests either a fiscal year crossing December or missing months between the labels. Treat the "steady growth" read as directional, not confirmed, until the full monthly axis is rebuilt.

GEOGRAPHY

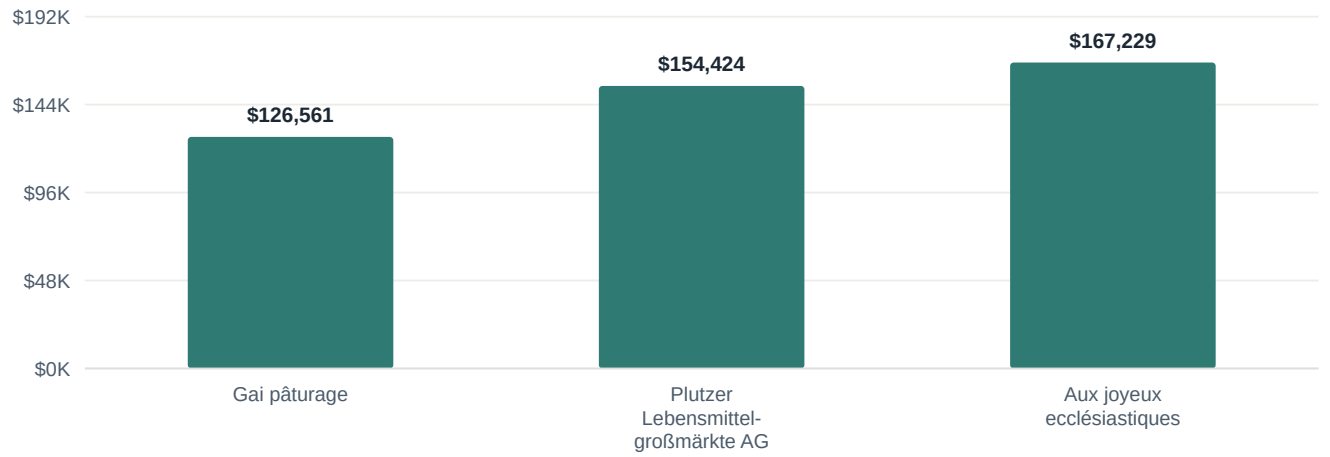

Top 5 selling countries

USA ($259,547.72) and Germany ($240,007.11) are far ahead of Austria ($127,314.61), Brazil ($110,772.28), and France ($88,413.57). Together the top two markets account for about **37% of total sales** — a healthy core, but also a concentration risk if either market softens. The gap down to Austria is roughly 2x, suggesting real headroom in the mid-tier countries.

SUPPLIERS

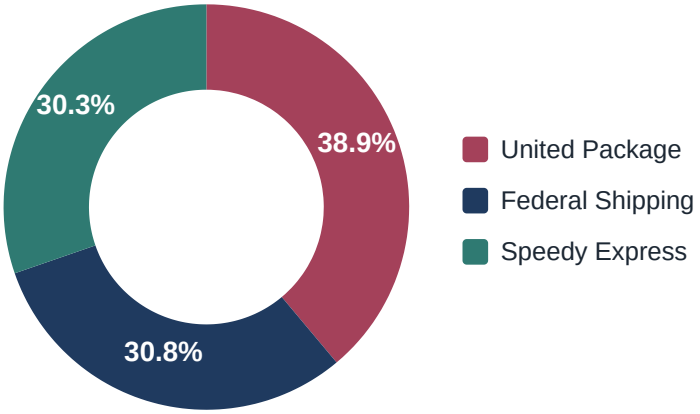

Top 3 suppliers in sales

Aux joyeux ecclésiastiques ($167,228.88), Plutzer Lebensmittelgroßmärkte AG ($154,424.40), and Gai pâturage ($126,561.07) together supply about **33% of total sales** ($448,214.35 combined). That's a meaningful reliance on three suppliers — worth checking contract terms and backup sourcing for each.

LOGISTICS

Shipping carrier mix

United Package (38.9%), Federal Shipping (30.8%), and Speedy Express (30.3%) split the load fairly evenly — no single carrier is a point of failure. *The dashboard doesn't label whether this % is of order count or sales value*, and there's no cost or delivery-time data to say which carrier is actually the best performer, not just the most used.

PRODUCTS

Top selling products

Not chartable as-is: the source "Top 10 Selling Products" bar chart shows only 4 of the intended 10 products and has no dollar values labeled on the bars — only relative bar length. Based on bar length, **Côte de Blaye** ranks first, followed by Thüringer Rostbratwurst, Raclette Courdavault, and Tarte au sucre, but exact revenue figures can't be read or charted honestly from what's visible.

SUMMARY

Key insights

#	INSIGHT	EVIDENCE	ACTION
1	Revenue concentrated in 2 countries	USA + Germany ≈ 37% of total sales	Investigate why mid-tier countries underperform; consider targeted expansion
2	Supplier base concentrated	Top 3 suppliers ≈ 33% of total sales	Review contract terms and backup sourcing for top suppliers
3	Growth trend is positive but unverified	Line chart rises, but date axis is non-chronological/sparse	Rebuild trend chart with a full, correctly ordered monthly axis

4	Shipping load is balanced	30–39% split across 3 carriers	Add cost/delivery-time metrics to confirm efficiency, not just balance
5	Product chart is not decision-ready	Only 4 of 10 products shown, no values labeled	Fix chart to show all 10 products with revenue labels

CONCLUSION

The business generated **$1,353,703** across **809 orders** (~$1,673 average order value), with an apparent upward sales trend. Two structural risks stand out: **USA + Germany carry ~37% of revenue**, and the **top 3 suppliers carry ~33%**. Neither is alarming on its own, but together they mean the business's performance leans on a small number of markets and vendors.

Before acting on this dashboard further, three chart issues should be fixed:

1. Rebuild the sales trend chart with a complete, chronological monthly axis.
2. Add dollar values and the missing 6 products to the "Top 10 Selling Products" chart.
3. Add a legend/value scale to the selling regions map, or drop it in favor of the country bar chart.
